Skills

- Languages & Frameworks: PHP, Laravel, JavaScript, ReactJS, HTML, CSS, Python
- Databases: MySQL, PostgreSQL
- Tools & Technologies: Docker, Git/GitHub, REST APIs, Visual Studio Code, IoT, Browser Extension
- Other Skills: Data Modeling, System Debugging, API Integration, Deployment Management

Certifications

**Intermediate Web Development
Course – in partnership with DICT
Philippines**

- Focused on Laravel, ReactJS, PHP, SQL, Git, HTML, CSS, and JavaScript

About Me

Detail-oriented software developer with hands-on experience in developing and maintaining scalable websites/ systems focused on backend logic, database management, and deployment for production. Skilled in Laravel, ReactJS, MySQL, and Docker, with a strong foundation in software development, RESTful APIs, and full-stack implementation. Known for resourcefulness, adaptability, and a collaborative mindset, delivering efficient solutions that align with organizational goals and user needs.

Professional Experience

TecPhil Geosolutions Co. — June 2025 Digital Communications and Software Developer

- Developed an internal mailing system to streamline communication workflows
- Developed a chrome extension to ensure enhanced operational efficiency.
- Maintain internal systems, ensuring secure and organized data documentation.

Boohoo/PLT — DDC, 03/2022- 05/2025 Data Processing & Workflow Coordinator

- Recognized for improving data management and workflow optimization.
- Applied technical and digital documentation practices for business operations.
- Developed strong problem-solving and organizational skills while handling technical data tasks.

Education

B.S. in Information Technology

2021-2025, Leyte Normal University

Academic Projects:

- Warehouse Inventory System (Individual) – Developed a full-stack web application for managing warehouse operations using Laravel (backend), ReactJS (frontend), and MySQL (database). Implemented Docker for deployment and Git for version tracking.
- Monitoring System (Group) – Designed a backend-focused monitoring system emphasizing data collection, schema design, and performance optimization. Deployed through Docker to simulate production environments.
- Both projects demonstrated strong integration between backend and frontend components, secure data handling, and efficient API communication.
